#### **USA CITY LOCATION (CALIBRATION) FACTORS:**

for Industrial / Commercial construction facilities. (Table # 5) The following values are calibration or location factors for adjusting values from Washington D.C. to a specific USA: Location factors are based on 50% - 50% split of labor and materials applicable for both process plants and buildings. An example of this is as follows; assume that you have estimated a building or facility utilizing this publication. The value you estimate was 6,745,700, that value would be based on costs for Washington D.C. if the project was to be built in Anniston Alabama the cost would be  $6,745,700 \times .85 = 5,733,845$
